DETAILED ACTION

This office action follows Applicant's letter of September 17, 2004 requesting a new office action. Claims 1-3, 5-7, and 10-36 were filed in the amendment (RCE) of June 14, 2004. The office action sent on August 19, 2004 is incomplete as only claims 1-3, 5-7, and 10-15 were addressed. The current office action addresses all pending claims.

Claim Rejections - 35 USC § 103

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 1-3, 5-7, and 10-36 remain rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,433,062 to Tasaka *et al.* in view of U.S. Patent No. 5,221,781 to Aida *et al.* for the same reasons set forth previously.

The reasons for rejection of claims 1-3, 5-7, and 10-15 remains invariant, and they will not be repeated here. Applicants may refer to any of the previous office actions for details.

New claims 16, 18, 20, and 30 recite the compositions of claims 1, 5, 10, and 15, respectively and include a recitation that the thermoplastic component (A) is partially crosslinked. Claims 22, 24, 26, and 28 recite the methods of claims 11, 12, 13, and 14, respectively, and include a recitation that the thermoplastic component (A) is partially crosslinked. The subject matter of these claims are obvious over the prior art because Tasaka *et al.* teaches use of 0.1-10 parts by weight of a crosslinking auxiliary relative to 100 pw of the block copolymer. Since the amount of crosslinking agent is significantly less than that of the polymeric component, one of ordinary skill in the art would have found it obvious that only a partial amount of the overall polymer would be crosslinked.

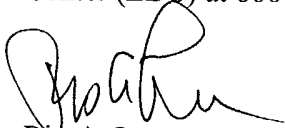

Art Unit: 1713

As explained previously, and as applies to claims 32-36, one having ordinary skill in the art would have found it obvious to use a silane coupling agent with a vinyl/epoxy terminus for the filler because Aida *et al.* teaches such an embodiment. Tasaka *et al.* is silent with respect to the degree of crosslinking, as recited in the remaining claims 17, 19, 21, 23, 25, 27, and 29. However, in light of the fact that the composition of the prior art and that presently claimed are essentially the same, and in view of the fact that prior art method for making the composition is essentially the same as that claimed, it would have been obvious to one having ordinary skill in the art to have a reasonable basis for expecting the compositions of the prior art to exhibit essentially the same degree of crosslinking. Since the PTO can not perform experiments, the burden is shifted to the Applicants to establish an unobviousness difference. *In re Best*, 562 F.2d 1252, 1255, 195 USPQ 430, 433 (CCPA 1977). *In re Spada*, 911 F.2d 705, 709, 15 USPQ2d 1655, 1658 (Fed. Cir. 1990).
